Town Council Met Last Monday For the Business

Mayor Sangster and Secretary
To Attend Conference

Meeting of Town Council was held Monday evening and the Mayor and all councillors were present.

A meeting of court of Revision was held last week and several home owners were present to request a reduction of taxes but only one was slightly reduced.

Our health inspector, Dr. Lew, is, submitted report, of town health conditions and said all was quite satisfactory.

Provincial Laboratory reported conditions in town were favorable, and would examine the water again bacteriologically and will send a container on demand.

A few applications for relief for unemployed and illness were passed for.

A. J. Hunt of Medicine Hat applied for painting the water tank here. The matter was referred to the Water Committee to decide.

A letter from the Medicine Hat Chamber of Commerce was read, asking assistance for assistance in sending a committee, to Ottawa to interview government in connection with the securing of irrigation in this district and was of here. The matter was left over till next meeting to decide.

A slight change of cost for water which is provided for citizens outside of town, was made.

Accounts as gone over by finance committee were moved for payment.

Mayor Sangster and Secretary I. U. Britt, were appointed as council representatives to attend the union of Municipalities held in Calgary on Friday and Saturday this week.

Council decided that in future the use of water for gardens will only be used from 7 a.m. to 9 p.m. any using beyond these hours are to be fined.

Exempt of increased taxes on buildings which have been improved has been passed.

No Doubt Aberhart Disappointed in Sask.

Alta. Unemployed Had Something
To Say In Sask.

There is no doubt that Premier Aberhart is greatly disappointed and no doubt more discouraged as the results of the election in Saskatchewan last week.

When Mr. Aberhart, nearly all the cabinet ministers and forty or fifty of his members and employees, spend several weeks to hold two or three meetings a day in all districts in Saskatchewan. They no doubt handed out about the same kind of stuff as the had in Alberta election a few years ago and it didn't catch as none of the promises here were fulfilled and some taxes were increased. There is also no doubt that the unemployed of Calgary who visited Saskatchewan and outlined government conditions of unemployment in this province had something to do with the re-

Service in Baptist Church Two Weeks

Commenced Wed. and Continues
Till July 3rd

Rev. Ar. Peterson, of the Church of the Nazarene, will conduct evangelistic services in the Baptist Church for two weeks, beginning on Wednesday evening, June 15th, (yesterday) and continuing until July 3.

The speaker will be Rev. Mrs. O. E. Beam of MacLeod. She will be assisted by two singers, a lady and a gentleman.

The services will begin every night at 7.15. There will be preaching and lively singing. Everybody welcome! Come and enjoy these services.

There have been such large crowds at every showing of "Snow White and the Seven Dwarfs" at the Monarch Theatre in Medicine Hat that it will be shown for the rest of this week at both the Hix Theatres.

Mr. and Mrs. A. R. Ballantyne and Norman Willis who attended a series of lectures on first aid, at the Superintendent's office, C. P. R., in Medicine Hat last winter, have been successful in winning their First Aid Vouchers and Certificates.

There was an error in our last issue in regard to services to be held in Gordon Memorial Church in future. Services will be held every Sunday evening, net beginning with the exception of the first Sunday of the month, the services will be held in the morning.

The Carnival in aid for the Swimming Pool will be in full swing on Saturday afternoon as well as on Friday evening and Saturday evening. This will give those who are working night shifts an opportunity to participate in this most worthy enterprise.

Messrs. R. N. Rose, J. Dacre and A. R. Goodine have done some considerable work with their tractor and teams on the new ground for our Swimming Pool during the past few weeks. All these gentlemen have made this work free and have made his improvements on the ground. The committee as well as other citizens greatly appreciate this and extend hearty thanks.

Several friends of Mr. and Mrs. J. Stratton gathered at their home last Thursday evening as a surprise party to help them celebrate the silver anniversary of their wedding.

During the evening cards were played and after a happy sing song, Mr. Buckholz on behalf of the visitors wished Mr. and Mrs. Stratton the best of health and happiness for years to come and presented them with an appropriate silver gift.

It is of the opinion of many that Mr. Aberhart and his cabinet were anxious to make a clean up in Sask so that they could call another general election here within the next few months. But now the bet is that there will be no general election here before some time in 1940.

Local Citizen Boosts For Swimming Pool

Be With The Crowd To Make
New Swimming Pool

Though experience improvements are attained; and you will find that the organizers of the Swimming Pool Carnival, which is to be held on Friday and Saturday of this week, have put their experience to good account, and their will be a big improvement in the way of entertainment provided over any carnival you have ever attended.

New novelties, games and competitions, and a bright lively tone will be provided for your pleasure each day.

Many persons are gladly giving their time, helping and supporting the venture, at no expense to the venture; and in this connection Mr. Rex Rose, Mr. Nelson Dacre, Mr. Jim Dacre and Mr. A. Goodine in particular have, without charge, greatly assisted by preparing the site of the New Park in which the Redcliff Swimming Pool is to be situated.

Alberta Withdrew The Privy Council Appeal

As Other Provinces Have Not
Associated Appeals

Premier Aberhart appealed to the other provinces of Canada to join Alberta in challenging the right of the Dominion government to disallow provincial legislation and the right of a lieutenant-governor to reserve royal assent on bills passed by a provincial legislature.

In a prepared statement issued here, the premier said the main reason Alberta recently withdrew its privy council appeals against court rulings which upheld those powers was because "the other provinces" had not associated themselves with these appeals.

Mr. Art Wray, of Calgary spent a few days here last week with his father, Dr. Wray.

Screen Star Travels Canadian Way

Leslie Farness, of movie fame, and her husband, Hal Wallis, official of Warner Brothers, are seen here on the Canadian Pacific liner "Queen of Canada" just before sailing to Honolulu for a holiday. They were accompanied by their five-year-old son, Hal Junior, who has never yet faced a camera, either professional or amateur.

Need Assistance To Get After the Local Irrigation

Business Firms And Farmers
Should Co-operate

Negotiations between the parties interested in the Redcliff-Rose Irrigation scheme are progressing favorably.

This scheme is of great importance to our district. It would take a thousand men with work for 1 1/2 years and would place agriculture in our district on a safe basis. Redcliff will derive great benefit, if the scheme is carried out.

The Medicine Hat Chamber of Commerce has arranged meetings and sent delegations to Edmonton at their expense. Redcliff although associated with Medicine Hat in this undertaking has contributed nothing. The Review realizes that it is difficult to raise money here but surely a movement, such as this deserves the support of our industries and businessmen. Get in touch with the local Chamber of Commerce and give this movement your support.

WHY WORRY

Why do folks worry?
Two chief reasons are because you are successful or not successful.

If you are successful there is no reason for worry. If you are not successful there are only two things to worry about. Your health is either good or you are sick.

If your health is good there is nothing to worry about, and if you are sick there are only two things to worry about.

You are either going to get well or you are going to die. If you are going to get well there is nothing to worry about and if you are going to die there are only two things to worry about.

Either you are going to heaven or you are not going to heaven. If you are going to heaven there is nothing to worry about and if you are not going to heaven you'll be so busy shaking hands with old friends in the place where you are going that you won't have time to worry. So why worry?

Base Ball Grounds Is Now In Shape

Requested to Keep Teams and
Cars Off The Diamond

Our town's baseball club is organizing for the season and have had the grounds fixed up on the south end of town.

As the grounds have been fixed up on account of teams driving across the diamond, it is hoped that in the future all amateurs and car drivers will keep off so that it will not be spoiled again.

It is expected that in the near future there will be a few games with several clubs from both east and west.

All the kids who are interested in the game and want to play it should be out at the practices.

Quadruplets Born In Liverpool, England

Give Birth of Three Boys and
One Girl

Liverpool, Eng., June 13—Quadruplets were born to Mrs. Esther Taylor, 29, wife of a teamster.

The babies—three boys and a girl—were healthy. The Taylors have four other children.

The quadruplets were born in Walton hospital, where doctors some weeks ago saw the unborn infants by means of X-ray.

A large medical staff attended the birth. As soon as they were born they were placed in cotton wool and put in an incubator which will maintain an even temperature of 98 degrees.

Physicians planned to feed them first on white of egg and perhaps a few drops of brandy.

The births will cost Liverpool taxpayers £200 (\$1,000) unless Mrs. Taylor's husband can pay. Elaborate arrangements had been at the hospital for the multiple births.

When gynaeologists took the X-ray pictures early last month and told Mrs. Taylor the would bear quadruplets the teamster exclaimed, "Well at more can a man ask?"

Mrs. Taylor said, "I never thought I would be in such a position but I am delighted."

Calling of a special session of the Alberta legislature in the autumn was reported to be slated for discussion when Social Credit members of the Alberta legislature met in caucus June 27 & 28.

Friday, Saturday For The Carnival On Broadway St.

All Funds Go To The New
Swimming Pool Here

Let us all get ready for the big Carnival here on Friday and Saturday this week-end for which the funds will be turned over for our New Swimming Pool.

There is no doubt that a number of new kinds of sports will be put on this week and all kinds of fun.

As well as all kinds of games there will be prizes given to those who draw the lucky tickets and prizes for the best kind of cakes.

The same nights of the carnival in the Broadway were there will be a dance in the building near and splendid music has been engaged for all the new shows.

There will also be all kinds of booths for all kinds of games and don't forget the shooting gallery. Bring your friends from all surrounding districts.

Mrs. Fairbairn, a former resident but who has resided in Calgary for some time, arrived in town yesterday and is visiting Mr. and Mrs. A. B. Ballantyne.

Tourists from U.S. are complaining about dusty roads in Alberta.

The wheat crop in U.S. this year is reported will be the largest crop on record. It is estimated will be over a billion bushel.

While holding meetings in Saskatchewan last week Mr. Aberhart said the people in that province are "a thinking people" for once he was right.

The calling of a special session of the Alberta legislature in the autumn was reported to be slated for discussion when Social Credit M.L.A.'s caucus June 27 and 28.

Great Britain, Belgium, France and Netherlands, were jered with an earthquake last Saturday. Buildings were shaken and chimneys toppled for a few minutes.

As no Conservative candidates were elected in Saskatchewan it now is admitted by all parties that a large percentage of conservatives voted with Liberal candidates in order to be sure to defeat the Social Credit Candidates.

Radio—A Problem

While criticism is the lot of the Canadian Broadcasting Corporation from all sources and, possibly, none of it is justified, there cannot but be some feeling of sympathy for the members of an organization whose "customers" embrace such a wide range of viewpoint and taste as the Canadian radio fans.

Those who take the time to secure all the facts and data available on the subject—and that in itself is not an easy task—cannot help but be impressed with the belief that the C.B.C. is in a tight corner if it attempts to achieve the impossible, and that is, to please everybody.

In no single home in this country is it possible to secure unanimity of opinion on the type of program that is acceptable to the listeners, to touch only one of the many problems that face the Commission. How much more difficult then, must it be, to satisfy a majority in a community, or the province or the nation. Even if it were possible to ascertain with any degree of certainty the desires of a majority in a local community, it does not by any means follow that a similar verdict would be given by a majority in another community; and there may be, undoubtedly, also variations in taste in different provinces of the Dominion and possibly between east and west. Yet the Canadian Broadcasting Corporation is expected to give all the people what they want in the way of music, entertainment and education over the air.

Golding Principles

Under such conditions about the C.B.C. can be expected to do is to try to determine certain fundamental principles for the guidance of its officials and editors as closely as possible to these tenets, at least the maximum cannot show that they are on the wrong track.

There is one policy, however, which in the interests of the development of Canadian arts, should not be sighted, and that is the maximum use of Canadian talent and national talent wherever it can be unearthed or can be encouraged and developed.

There is reason to believe, judging from comments made by adjudicators who have recently been placing awards in the provincial musical festivals in the western provinces, that there is much talent of a very high order which is being neglected to go to waste, or, at least actually being wasted. There are many people, however, to those who appreciate music to anything like the extent it should be, or could be, if the C.B.C. were prosecuting a vigorous search for good material of Canadian origin.

A Major Objective

When the Canadian Broadcasting Corporation was set up it was announced that one of its objectives would be to develop Canadian talent and in fact, this was one of the strongest recommendations of the Aird Commission's report in 1929 when the Commission said:

"In our survey of conditions in Canada we have heard the present radio situation discussed from many angles with considerable diversity of opinion. There has, however, been unanimity on one fundamental question—Canadian radio listeners want Canadian broadcasting. . . . At present the majority of programs heard are from sources outside of Canada. It has been emphasized to us that the continued reception of these has a tendency to mold the minds of the young people in the home to ideals and opinions that are not Canadian. In a country of the vast geographical dimensions of Canada broadcasting will undoubtedly become a great force in fostering a national spirit and interpreting national citizenship."

While the present radio program is being set out with this idea in mind, unfortunately there has been a recent recession from this principle, with announcements that "all more time in the future will be devoted to programs of foreign origin—meaning, of course, from United States sources. Feasibility to finance broadcasting of all-Canadian programs has been given as the reason for this departure from the original objective."

This recession from the all-Canadian ideal is very regrettable and it is to be hoped that management will be found for returning to the principle set forth in the Aird Commission report and promulgated when the Canadian Broadcasting Corporation was given charge of "the ether."

Abolish Private Stations?

Commenting on the situation the *Labour Review* in a recent issue went so far as to suggest that privately-owned stations should be abolished as a means to this end.

"If we are to have a thoroughly Canadian broadcasting service," said the *Labour Review*, "the privately-owned stations must be abolished. Maintained as they are by advertising, broadcasting in Canada cannot be freed from commercial appeals while the private stations remain. And since much of the paid broadcasting comes from foreign sources the continuance of the private stations militates against the fulfillment of the purpose for which the national radio service was established."

The same authority contends that "the only valid reason for the Corporation's advertising program is the need of revenue to meet the expense of the national radio service. The revenue, and private business."

Whether or not this is the correct diagnosis and solution of the problem, certainly it is a matter of grave concern to the country as a whole and one which should receive the most careful consideration.

Fish have sensations of discomfort, but their pain nerves are not developed to as great a degree as in higher forms of life. For this reason, they suffer very little when hooked or speared.

Two pairs of claws for each pair of trawlers—one pair attachable for frosty weather—is the patented invention of a tailoring house at Rochester, N.Y.

Opinion Of Sir Wilfrid

Why More Able Men Entered Parliament In Early Days

When the writer was a member of the House of Commons, says A. H. Ford, in the *London Free Press* we recall asking Sir Wilfrid Laurier at one time whether it was true that the caliber of the members in the early parliaments were superior to those of that day.

Sir Wilfrid Laurier replied, "Yes. We asked him 'Why?' Here is his reply."

In the early days of Canadian business was on a small scale. The rewards of commerce were comparatively meagre. The chief ideal of an ambitious youth lay in politics and law. The ablest men of the country sought a political career. To-day, on the other hand, with the development of big business the opportunities in commerce and finance are so great that no brilliant, energetic young men want to risk a political career with the uncertainty of public life."

Alberta Co-Operatives

Had More Year Since Incorporation Seven Years Ago

After issuing or providing for thirty, of which \$17,582, the United Farmers of Alberta Central Co-operative Association had a surplus of \$8,640 for the year ending March 31, 1932. It was reported following a meeting of board members at Calgary. It was the best year since incorporation of the association seven years ago.

While total volume of business handled was not as great, yet commissions of the association which acts as purchasing agent for country points amounted to \$146,640 for the year.

The Co-operative Association, catering to U.F.A. members and patrons, has a store on Main street in Edmonton, and a large number of retail outlets and handles such farm staples as binder twine, coal and fence posts.

Interested In His Work

Eighty-Four-Year-Old Man Kept Job Until He Died

Eighty-four-year-old Charles Mulberry, of Wainwright, worked until he died.

The coroner said: "His proper place would have been a comfortable armchair by the fire in the garden."

But Charles Mulberry thought differently.

Until failure ended his chapter he worked every day as an estate agent.

He was a proud man; proud of his appearance; he always insisted on wearing a stiff collar and a white shirt.

After fifty-four years with one firm he found another job when the first closed down.

Charles Mulberry had something you can't buy—a lifetime interest in his job.—*London Sunday Dispatch.*

Ends Back-To-Nature Test

Half-Breed Indian-Guide Lived On Game And Herbs

Alton (Seneca Speller) Draper, 20-year-old half-breed Indian guide, has ended a 30-day "back to nature" stay in the Adirondack woods.

In lettered clothing he walked in to his home at Star Lake, New York, to end his sojourn, which was planned to "show the world that the native is still the friend of man who is in the days of his ancestors."

He said, however, that he could not have "held out much longer."

Draper entered the woods April 3, with only his clothing and a hunting knife. During the month he provided for molybdenum, and lived on muskrat, porcupine, fish and herbs.

A woman correspondent wrote: "All I have to say to my husband is, 'Are you going to move these leaves or are you?' And then he either does or doesn't, of course."

The really fascinating woman is the one who can always convince us that she knows less than we do.

For Your Preserving

Use It This Year

National Defence

Position Of Canada On Question Of Armaments

The government desires to create in Canada as far as possible, a national self-sufficiency in armaments against the emergency of war, officials at Ottawa state. However, this does not mean beginning the extensive armament industry to supply Canada's requirements.

Second provision for the current needs of the defence forces, the government does not propose to embark on any large expenditures in armaments, the information possessed by the defence department relating to the capacity and character of this country's heavy industries has always been available to the war office.

At present three Canadian concerns are understood to be working on British contracts—National Steel Car, Hamilton, manufacturing a comparatively small quantity of 3.45 inch shell casing; the John T. Hepburn Company, Toronto, engaged in manufacture of shell-making machinery; and the John Inglis Company Limited, Toronto, recipients of an order for 5,000 Bren guns.

Under the terms of the British contract with the Inglis Company involving 7,000 of these light machine guns, however, will likely be spread over a period of years. Arrangements which resulted in the John Inglis Company being constituted the first manufacturer of the Bren gun in Canada were designed to achieve some degree of concentration, with a general saving to all concerned.

Highway To Alaska

Project Is Favored Of Building Road Through Canada

Harold Ickes, secretary of the interior at Washington, said that his conversations with British Columbia authorities convinced him of the soundness of a plan to build a national highway from Seattle through Canada to Fairbanks, Alaska.

Ickes said he had "surveyed the whole problem" with Premier T. D. Pattullo of British Columbia and his aides, who came to Washington.

"We discussed the matter of financing the project and the worth of the project as a link between the Alaska and British Columbia and the Yukon territory to further settlement."

Mr. Chamberlain made about 650 feet of film. His speech dealt mostly with foreign affairs in regard to which he asked: "Can we keep out of war without sacrificing our liberties, dishonoring our obligations?"

"Although it takes two to make peace, one power can make war," he said. "If we are attacked, we should have to defend ourselves."

Black Boy, a cat, lives at a police warehouse in Kansas City, Police, pursued by a series of false burglar alarms, found that when Black Boy walked with tail erect, it registered on an electric eye signal.

SELECTED RECIPES

PINEAPPLE UPSIDE DOWN CAKE (One Egg)

1 cup sifted Swart Down Cake
1 cup sifted Sugar
1/2 teaspoon Cinnamon Baking Powder
1 egg well beaten
1/2 cup granulated sugar
8 tablespoons softened butter or other shortening
1 egg well beaten
1/2 cup milk
1 teaspoon vanilla
4 tablespoons butter
4 tablespoons pineapple, firmly packed
3 cup broken pine nuts
Bake in 8 inch cake pan, measure, add baking powder, salt, sugar, and eggs. Bake for 15 minutes. Add butter, combine egg, milk, and vanilla. Add 1/2 cup milk, stirring well. Bake 15 minutes; then beat vigorously one minute.

Melt four tablespoons butter in a 8 inch square pan. Add sugar, salt, and eggs. Bake for 15 minutes. Add butter, combine egg, milk, and vanilla. Add 1/2 cup milk, stirring well. Bake 15 minutes; then beat vigorously one minute.

Other fruit may be substituted for pineapple and nuts in this recipe and may be arranged in butter-sugar mixture in the pan. These fruits include cooked prunes or apricots, canned or fresh cherries, seedless, or sliced apples.

Three swing bands will provide plenty of music at the Canadian National Exhibition this year. People who still appreciate music, the Royal Artillery Band of England will be located at the opposite end of the grounds.

Out of 16,000 different grasses—including corn and wheat—about 1,800 are native to the United States.

An Expensive Rug

New York's Waldorf-Astoria Has One Costing Over \$12,000

The Waldorf-Astoria laid a new rug in its Park Avenue lobby late one evening recently and we happened to be on it. It was proposed as a present to a hotel as ever seen. We will quickly lay down the statistics we gathered. The rug is 48 feet 11 inches by 48 feet 11 inches, and measures 2,328 square feet. It has a pile a little over an inch thick, and sixty-nine shades of yarn-are sprinkled into its fifteen million tufts. It took sixteen weavers eight months to make. Only the Mohawk Carpet Mills, W. & J. Sloane, and the Waldorf know how expensive it was, but we got it from a man in the rug trade that the monster must have cost about \$60,000.

It isn't the biggest rug in the country; the biggest is of 2,840 square feet and is in the Nebraska State Capitol, but that one is monochromatic and consequently less endearing to rug people. The Waldorf is bigger than the rug in the Ritz Hotel, from which 12,000 pieces of chewing gum are removed yearly. The Waldorf anticipates no trouble along these lines.—The New Yorker.

In Talkie Film

Prime Minister Chamberlain Makes Speech On Reform Of Government

Prime Minister Chamberlain took the major role in a "talkie" made at a film studio in London. The film is one of a series to be shown in an open air campaign on behalf of the National Government during the summer.

Mr. Chamberlain made about 650 feet of film. His speech dealt mostly with foreign affairs in regard to which he asked: "Can we keep out of war without sacrificing our liberties, dishonoring our obligations?"

"Although it takes two to make peace, one power can make war," he said. "If we are attacked, we should have to defend ourselves."

Notes On Summer-Fallow

Methods To Follow To Prevent Soil Drifting On Prairies

Summer-fallowing requires the most thought and care of any operation encountered by the grain farmer or the Canadian prairie. The correctness of this statement, states A. S. Palmer, Assistant Superintendent, Dominion Experimental Station, Lethbridge, Alberta, is recognized when it is understood that the soil drifting takes place on fallowed land. The proper handling of summer-fallows therefore becomes the main factor in making the prairie grain farmer's greatest harvest—soil drifting.

Soil drifting control has been much more easily accomplished by strip farming than by fallowing in large blocks and this year many more farmers will strip their fields.

Ploughless fallows cultivated in a way that will ensure a good trash cover being left on the surface have proved to be much superior to bare ploughed fallows in retaining drifting and so most farmers will use the trash cover method of fallowing where they have sufficient stubble or dead weeds to give a good trash protection.

Farmers everywhere are recognizing that if on-cowry or cow data are used for ploughless fallowing, great care must be exercised to prevent covering the trash. Dockfoot cultivators or blade weeders are preferred where they will operate except where Russian thistles are forming the trash and need to be pulled to prevent them from blowing away. Cultivators will go through a surprising amount of trash if they are run deeply enough to go below the roots crowns.

An important point in the management of fallows is to watch the fields for any sign of drifting. It is surprising what a little straw scattered here and there will show or some listing will do to stop spots from drifting that may involve the entire field.

The reason for fallowing, of course, is to store moisture for the succeeding year's crop and to control weeds. This is not extremely difficult as moisture that enters the sub-soil can be best conserved, apparently by preventing weeds and other plants from growing. Thus weed control and water conservation are accomplished together.

Getting the precipitation into the sub-soil of fallows instead of permitting it to run off is more difficult. Deep cultivation is thought by many to be the method of ensuring maximum penetration of water but experiments and experience do not substantiate this opinion on most soils. Comparisons made on ploughed and ploughless fallows on the Dominion Experimental Station and Sub-stations of the prairies show that more moisture stored in deep ploughed fields than in ploughless fallows fields that are tilled to a depth of but three or four inches and grain yields have been no better with deep tillage.

At the present time tests are being made with basin tillage, contour cultivation, contour ridging or ditching to hold the water in basins and so it will seep into the sub-soil. The results of these tests will be watched with interest.

Watch Entirely Hand-Made

Has Only Been Repaired And Cleared Once In 150 Years

Jeff Porter, C.P.R. agent at Melval, Sask., has something of a hoard when it comes to watches. His watch is 150 years old. It still keeps good time.

The watch has been in his family for many years. Since it was first purchased it has only been twice to a jeweler's office, once 124 years ago for repairs and last March, to be cleaned.

When the jeweler who cleaned it recently returned it to Mr. Porter, he gave him a signed statement to the effect that he considered the watch to be about 150 years old, that it must have cost at that time between \$300 and \$500, then considered cheap, since it is entirely hand-made. A large movement in a sterling silver case, the watch has a chain instead of fob. It is wound a key.

Being More Particular

The Toronto Daily Star said several Canadian insurance companies have notified their agents they will not grant personal liability and property damage insurance on automobiles to be driven by persons more than 19 years old. The Star said at least one company had decided against granting insurance on cars registered by persons under 21.

H. B. Shipping

Powerful Ocean Going Tug To Guide Vessels Through Hudson Strait

Replacement of the icebreaker N. McLean with the powerful ocean going tug, Ocean Eagle, to guide shipping through Hudson Strait into Churchill this season, "is purely an economy move," Hon. C. D. Howe, Minister of transport, said. "We think the Ocean Eagle is better fitted for the job than the McLean." Both ships belong to the transport department.

The McLean is one of the greatest ships of her kind, costing over \$1,000,000. She will still be used breaking ice in the St. Lawrence in the spring and fall and when required in the winter. She will probably be tied up in Quebec most of the summer.

The Ocean Eagle has been used several years as a tug in Churchill harbor. There is also another smaller tug there. Original purpose was to have the Ocean Eagle available to assist freighters visiting the harbor to dock. However, the great work at Churchill is so easily approached that tramp ships sail alongside under their own steam and the tug has had little to do.

The McLean in past summers operated from Cape Welschmole on the southwest corner of Hudson Bay. She kept up a search for any ice which might appear in the channel and warned approaching ships. The McLean never did any actual breaking in the straits.

"We believe that the Ocean Eagle will really do this work better than the McLean did," the transport minister said. "She has all the equipment necessary—wires, gyro-compass and a powerful search light. In any event we are going to try it out. The smaller tug will be available in Churchill and will service the coast and political operations. The straits watching ice conditions."

Practical Farm Animal

Oxen Not Fuel Workers But They Learn Quickly

Oxen are slow beasts—even when goaded their gait with a lead on level ground does not excite two miles an hour and a powerful man may carry them from America's prairie age up to the present era. In many countries of central Pennsylvania they are shipped to tractor and horse, according to the State Public Commission, said in some communities they are as numerous as ever. Four years ago they were called to aid in the rehabilitation of the Alabama families whose earnings had been ended and whose savings had been swept away by the depression. As late as 1934, the director of rural rehabilitation for the Alabama relief administration, pointed out, oxen were used not because of the cost but because of the most efficient farm-work animal but because under such conditions he is the most practical. It is not likely that a mule, little food need be bought for him, and he can be broken to do his work in a few days. He is a domesticated animal of families who left for Tennessee and Alabam, new colonization and he has received from the Government a pair of oxen for farming. While horses command high prices, oxen could be obtained for \$35 a year.

The handling of oxen has not changed in 150 years. They are still driven from the rear (left) side, the ox on that side responding to the driver's commands. The rear ox keeps his eyes on the driver, and if trained can anticipate commands by the position of the whip in the driver's hands. Nowadays the whip is seldom used as a goad, but only to signal the team. Goats and hares are still used for "turn to the right" and "turn to the left," respectively, and "whoa" to stop—New York Sun.

Getting Around It

A youngster in Boy Scout-uniform found an envelope containing tickets. The envelope bore a name and address, and the boy, accompanied by his young brother, went there at once.

"Sorry, I'm a Scout," said the boy. "It's my good deed for the day." The man was on the point of returning the shilling to his pocket, when the Scout went on: "But my little brother isn't a Scout."

A Quiver Regretted

Seven years ago Mr. and Mrs. T. M. Taylor visited the L. W. Testes in Los Angeles. A driveline car rolled down a hill through the Taylors' bedroom. Recently the Taylors visited again at the Testes home. Another car rolled down the same hill and into the same room.

The last way to make friends and influence people is to mind your own business.

WAR MINISTRY'S PLAN FOR TANK RANGE CAUSES PROTESTS

The British War Office are proposing to acquire a great area of land on the Pembrokeshire Coast in Wales for the purposes of a Tank gunnery range, and the scheme is meeting with much opposition from many quarters. Our photograph shows Meriton Church, Pembrokeshire, with a stretch of land behind which would be included in the area.

Would Puzzle A Stranger

British House Has Its Own Way Of

Any stranger uninitiated in the

House of Commons would have been puzzled by an incident such as occurred the other day, comments the London Daily Sketch. There had just been a burst of questions, interjections and remarks. The House was quite excited. Suddenly from every corner came a roar of cheers, spontaneous, unanimous, continued. Mr. Churchill, entering the House at the moment looked round surprised. But the cheers were not for him. Nor were they for any Minister. Away at the back, Joe Batty, persistent heckler of his close friend and political opponent, the Minister of Labor, had risen to ask a question. Everyone knew it was his golden wedding day, but even he was taken aback by the warmth of recognition. "It's the penalty of being married so long," he murmured in quiet apology to the Speaker for the holdup of business. Then he put his question.

The Great Seismologist

J. J. Shaw Took Up Study Just At

A Hobby

The News of the World says J. J. Shaw, who denied the other day any record on his instruments of London's reported "earthquake," is the world's greatest seismologist. He has records of thousands of earthquakes from China to Peru. Formerly a pawnbroker, Mr. Shaw, who is 62 years of age, took up seismology as a hobby on his retirement. He has a C.B.E. decoration and an honorary Bachelor of Science degree conferred by Birmingham University for his contribution to this branch of science.

The apparatus he has installed in the basement of his house at West Bromwich for registering earthquakes is the most valuable in existence. It cost £1,500.

Just In Case

Neal O'Hara, in the New York Post, says the Germans—and now the Austrians—may profess their love for Dr. Fuhrer, but Adolf still has a homelike refuge for himself, brewed out of solid rock adjacent to his hideaway retreat at Berchtesgaden in southern Germany—just in case.

The toll charge for a one-ton road going through the Panama canal would be only 75 cents, but it would require "just" as much water in the various locks as a first-class battleship.

The giraffe is the only mammal that cannot make a vocal sound. It is mute even to its death agonies. It is also the tallest of animals and has a foot canal ninety yards long.

Establish Game Preserve

70,000 Square Miles In Mackenzie

Helped Him Succeed

A man seeking to learn the secret of John Wansmaker's success asked one of the great merchant's friends. "What was it gave the business bent to John Wansmaker's mind?"

"The same thing that has given a bent to many other minds," the friend answered, "necessity."

"What made him succeed?"

"Capacity coupled with indomitable energy. He has no patent on success. Any other man may use his means if he will. But few men will work as hard as he. I have never known one other man to do so."

"How does he keep his head under it all?"

"By masterful organization, and one bit of philosophy."

"What is the bit?"

"He expressed it once to me in these words: 'Do the very best you can, and leave the rest to Providence.'"

"What is the bit?"

"He expressed it once to me in these words: 'Do the very best you can, and leave the rest to Providence.'"

"What is the bit?"

WORLD HAPPENINGS BRIEFLY TOLD

J. Cahoon, Swiss journalist and author, has gone to Churchill on a one-man expedition to study Canadian Indians and Eskimos.

Many steepleships in the north of England were cancelled in April owing to bad ground. Track-ventures in the north of England were cancelled in April owing to bad ground. Track-ventures in the north of England were cancelled in April owing to bad ground.

Alfred Duff Cooper, first lord of the admiralty, has invited 35 Canadian school boys under 19 to visit British ships and officers of the home fleet during the summer manoeuvres.

The British government announced in the House of Commons it was considering establishment of an air service across the Pacific ocean from Canada to New Zealand.

Dr. Harold J. Ross, coal researcher, declares the total energy released by Niagara Falls in an hour can be matched by the burning of eight carloads of anthracite coal.

Training carried on in England to deal with various pigeon gas emergencies is "interesting but terrifying," said Mrs. E. B. Jost, of the Women's St. John Ambulance Brigade, after taking the course.

Plans under the Home Improvement Plan numbered 37,983 and amounted to \$1,489,134 at April 30 last, Hon. Charles Dunning, minister of finance, announced.

Increases of 3,792 loans with a value of \$602,138 in April.

United States shipments of war materials to China and Japan exceeded \$10,000,000 in the five months ended April 30; 35 per cent went to China and the rest to Japan, the department records showed. The rate was far in excess of last year.

The Royal Canadian Mounted Police is becoming a scientific organization, but friends of one applicant want to call it a sting out. Sgt. Lindsay of Hamilton, 20, six feet five inches in height and weighing 228 pounds, tried to join the force and was told he was "too big."

See Encroaching on Britain

Process Seems To Be Gradual And No Alarm Yet

There is a rumor that Britain is sinking—at the rate of one inch every five years. Neptune is an obstinate old fellow, as Canada found out, but it is unlikely that Britain will be much alarmed at his new thrust, nor imagine that when she was long defeated against the might of the world she must now yield to the man. She may give Neptune his inch, but he would be foolish to take it as a knell or her doom for the future. Besides which, it is unlikely that he really intends to waive the rules of the gentlemanly sport by which it is understood that she rules the waves.

Nevertheless, apart from any far-reaching and sinister design, he has, like the rest of his peers, his nefarious file; and if we may judge from the recent incident at the Norfolk coast, Campbell was a singularly unwise counselor, when he remarked, "Britannia rules the waves." The local Catchment Board is definitely pro-Canada in its theories, and continues to spend, between a quarter and a half million pounds on the defense of a twelve-mile stretch of their shore—Christian Science Monitor.

Clinical Discovery

Reported Use Of Human Skin To Cure Diseased Tissues

A Russian professor reported discovery of a process in which the skin of a dead person could be used with restorative effect on diseased tissues of the living.

Professor Pilatov, telling of his work in the British Medical Journal, The Lancet, said he had discovered a skin disease by the new methods with results "surpassing all his hopes."

He said he removed an ulcer and covered the wound with skin taken from a corpse. Improvement was noted in two days and the wound eventually healed. His report said the skin of a dead person could be preserved at least four months.

Churches In Russia

Members Increased By 887,404 Last Year States Report

It has been reported that Russia classed 613 churches during 1937. A member of the Russian Minister of War has renounced war and declared that he will become a Christian minister of the Gospel. The War Minister promptly declared that he would renounce his kinship with his former military and recognize the insensibility of war and Christianity. It is said that the Christian Churches in Russia numbered 468 members last year—The New Outlook.

Should Take Eden's Advice

Admirers Of Former Foreign Secretary Have Chance To Show Loyalty

Anthony Eden, says the Toronto Evening Telegram, has struck the right note in his appeal to the British people for national unity and in his warning that they are facing not a passing crisis but a condition that may determine whether freedom or tyranny shall prevail. The dictator states, as he points out, have realized achievements that, given the odds and terrifying; their rulers have succeeded in awakening passionate fear for their aims and ambitions, and democratic nations must make a comparable effort if liberty is not to be swept aside. "Party warfare for its own sake should have no place in the scheme of things to-day," he says.

Mr. Eden has made many admirers both during his term in office and since his resignation. None question his devotion to the ideals of democracy and peace, many even among those who were his bitter critics, contend that his political instinct is better worth taking than that of any other in public. His following is large and his influence great. If he continues to exert that influence for the promotion of national unity and the discouraging of petty party politics, he will serve Britain well even as a private member. If those who have been acclaiming him will take his advice to heart, his movement may be greater than it could ever have been in the Foreign Office.

Only Two Names

People Are "Joe" Or "Chief" To Philippine Service Men

According to the Philippine Magazine all sailors, soldiers, and marines are known to the hangers on at Legaspi landing and other places frequented by service men as "Joe," it's "Taxi, Joe!" or "Hi, Chief," from the time he goes ashore at night until he piles into the liberty boat, and, steering himself to go back to his quarters, he may have as much of a hangover as he may have.

If he is in civilian clothes, he is "Chief." (Only chief petty officers could address him as "chief" while on liberty.) By extension, most Americans who have business (or pleasure) in Manila's port area become "Chief" or "Joe."

I have heard sweet old lady tourists and dignified capitalists of industry so addressed by respectful shoe shine boys. "Shine, Joe!" pipes the urchin, solicitously pointing to the old lady's shoe.

Gardening

In selecting a list of annual flowers, attention must be paid, of course, to time of blooming and color. It should also be noted as a medium of comparison, the color of the plants. Bushy shrubs or tall combs, for example, are not so good as a few years' experience has shown. In the selection of other and finer distinctions. Certain shades blend well together and others who will be in the shade with this blending in mind. Of course, for this sort of thing, all the plants must bloom during the same period. For example, the flowers of the plants, such as there are some apple things like the Magnolia, Sweet Shrub, and Verbena, which while rather plain as plants, fill the whole garden with a delightful incense, more especially in the evening. In shaded quarters, tuberoses-rooted Begonias, Pansies and so on will do well. In fact, they prefer this location to any other. In partial shade, Clarkia, Anemone, Lupine, Nicotiana, Phlox and Verbena should be grown. On open soil, Portulaca is a favorite, as well as Alyssum, Sweet-scented Geranium, Linn, Clematis, Calliopsis, Sunflowers, Scilla, Ranunculus, Marigolds, Petunias and many others. These may also successfully resist dry weather. Practically any of these flowers may be planted successfully.

Planting of most flowers and vegetables is best done after the plants are up an inch or so. With flowers a good rule is to have half as much space between as the plants will be high. This will be a foot between ordinary marigolds, petunias and nasties, two to three feet between cosmos and dahlias, but only an inch or two between the plants of ranunculus, lobelia and other edging plants. Well spaced flowers will be more sturdy and thus resist heavy wind and rain. Even the smallest vegetables such as lettuce and radish must be thinned too. An inch or so between the plants is a good rule. The room that will be needed for carrots and beets, because of their size, should be developed roots an inch thick and two or three long, every other plant should be removed and used, and this proceeding followed the same rule is used up.

It is not too late in most parts of Canada to order and plant personal flowers and even shrubs and vines. Orders towards the end of the season is not as wide as earlier there should be a good choice.

An unwritten rule of the Japanese army is that an officer who has been himself not held captive by the enemy.

Too Late For Thousands

British Medical Research Council Makes Statement About Penicillin Operation

The Medical Research Council of Great Britain is a strictly professional, properly conservative, thorough and quite unselfish body. It is a body of men, with a high standard of moral and scientific integrity. It is a body of men, with a high standard of moral and scientific integrity.

Old Hippocrates, the Father of Medicine, must have done at least a hand-spring in his Greek garden, therefore, when, that eminent organization issued a report announcing that it now knew the exact measure of the majority of total operations is any more than a routine prophylactic ritual for no particular reason and with no particular result.

The public, of course, will be well advised to note that phrase the majority of. Because the vast majority of men in Great Britain and all over the world, to realize that they have had their tonsils removed, they have had their tonsils removed, they have had their tonsils removed.

But, for the rest, just think of the shock it will be to thousands and thousands of people in Great Britain and all over the world, to realize that they have had their tonsils removed, they have had their tonsils removed, they have had their tonsils removed.

Time was when a sovereign remedy for all the ills wherewith human kind is plagued was to pull out all a fellow citizen's tonsils. That technique has been submitted almost to the vanishing point within recent years.

And now this latest Medical Research Council report gives rise to other alarming possibilities. Perhaps—why not?—the appendix may be next on the list. One should be to think what would be the repercussions of this. The vast majority of the last couple of decades had been in the nature of a "routine prophylactic ritual." This sort of thing goes on, it soon won't be safe to talk about one's operation at all.—Branford Bazar.

Paper From Straw

Advocates Producing Newspaper From Straw On Western Farms

Use of straw to produce newspaper was advocated at Saskatoon by A. J. Roden, president of the Canadian Jewellers' Association, when speaking to a local group of jewellers. Mr. Roden said the "straw" has come when the west, from a national standpoint, has got to protect the forests of Canada by prohibiting the export, to be made from the straw that is burned each year on the prairie.

Mr. Roden continued: "Science is so far advanced that it is possible to commercially and satisfactorily produce newspaper from straw. Moore, outstanding eastern Canadian paper engineer, has produced paper from straw in experimental plants."

Thousand-Ton Domes The 2,000-ton dome that will safeguard the 200-inch telescope of the California Institute of Technology has been completed on Palomar Mountain, Captain C. E. McDowell, supervising engineer of the project, said the dome of the new observatory is 14 stories high and almost a city block in circumference.

Uncle Sam once granted a patent on a cemetery monument of air-tight glass in which the funeral flowers could be preserved.

An educated person is one who can name the equine, the six delicious flavors and the seven dwarfs.

CHRISTIE, BROWN AND COMPANY OFFICIALS

ALEX A. FRASER

Alex A. Fraser, appointed to the presidency of Christie, Brown and Company, Limited, succeeding Chas. E. Edwards, who became Chairman of the Board of Directors after 43 years with the Company. Mr. Fraser, a native of Ontario, has been Vice-President in charge of production for the past eight years, and has many years experience in blanchet manufacturing.

FLATTERING CAPELET-PROCK

By Anne Adams

Revel in the thought that now you have book smarts, sminner, younger! How? The answer is easy—read the Pattern 4807, and make up this delightful style quickly and easily at home! This charming Anne Adams pattern is given to you that you don't have to be an experienced dressmaker to know that you can make up your wardrobe in a short time. Can't you value yourself in this delightful style. It gives you lines set off by colorful flowered voiles, or a dainty synthetic shawl. You'll love the flattery of its full caplet. Pattern 4807 is available in women's sizes 34, 36, 38, 40, 42, 44, 46 and 48. Size takes 4½ yards 36 inch wide material. Pattern includes instructions for making up. Cost, ten cents (20¢ in color). Write for it to Anne Adams Pattern, Dept. W-10, 1000 Broadway, New York, N.Y. 10019. Write for it to Anne Adams Pattern, Dept. W-10, 1000 Broadway, New York, N.Y. 10019.

Highest Mill Building

Will Shortly Be In Operation At Newcastle-On-Tyne

Begun about two years ago, the great flour mill for Messrs. Spillers Ltd., at Newcastle-on-Tyne, the highest mill building in the world, will shortly be in operation.

The site are designed to store over 100,000 quarters of grain, and ships cargoes can be discharged into them at the rate of 100 tons an hour. The flour mill and granary mill are situated above the warehouse, so that manufactured goods can be placed in store by force of gravity only.—Industrial Britain.

Huge Sea Shell

A sea shell large enough for a baby's bathtub has just been brought to the Australian mainland. It weighed 400 pounds, is 2 feet 2 inches long and 2 feet 1 inch wide. It was found on a reef off Gilbert Island.

The most overworked word is "very." Try leaving it out and see how much more effective the sentence sounds.

The piston displacement of a motorcycle is only 21.35 cubic inches.

CHRISTIE, BROWN AND COMPANY OFFICIALS

CHAS. E. EDMONDS

Chas. E. Edmonds, appointed to the presidency of Christie, Brown and Company, Limited, succeeding Alex A. Fraser, who became Chairman of the Board of Directors after 43 years with the Company. Mr. Edmonds, a native of Ontario, has been Vice-President in charge of production for the past eight years, and has many years experience in blanchet manufacturing.

Blind Eyes Baseball

Game Has Been Devised At Home In California

News of the latest move to aid the blind comes from Oakland, California. At the Industrial Home for Adult Blind there a baseball game has been devised for the patients. The ball used contains a bell. The pitcher rolls it on the ground toward home-plate, where the batter, using a hockey stick swung at it. A batter, operated from behind the plate, tells the fielders near which base it has been hit. Aided by bell and buzzer, the fielders, who kneel behind the bases, enclose, scoop up the ball and roll it toward the base which the sumner is approaching.

It's a long way from this game of baseball to the regular game we know, but the kind are said to get much entertainment out of it and to have acquired proficiency in hitting, fielding and base running.

Heretofore, the only ones connected with a baseball game who have been blind are the umpires and apparently from the accounts of the game invented at Oakland there is no need for umpires. So that squares the account.—St. Thomas Times Journal.

Made Of Locust Wood

Night Sticks Used By New York Police Are Different

New York City police carry a night stick 22 inches long, made of locust wood. Locust is not heavier or tougher than other woods that have been selected, but it has a distinctive ring to it rivaled by no other wood.

A policeman on a night beat is to be able to get hold of his sidekick on the beat on an instant's notice. He gets into a jam. A police whistle is all right, only too many kids are blowing them around and a cop can't be perfectly sure whether he's whistled or not when he hears one.

No policeman ever mistakes the ring of a locust night stick when it's dropped on the pavement. His can hear it for 30 blocks and he'll come on the run every time—Commentator.

Charm Of A Library

Is In Possessing Books You Intend To Read Some Day

The cartoonist of books need not fear the challenge that is sure to be made, sooner or later, by his skeptical acquaintances. Have you read them? The first and most important to get out of his head is that he must only buy books for immediate reading.

"The charm of a library," said that devout book lover, the late Arnold Bennett, "is certainly inspired when one has read the whole or nearly the whole of its contents."

Bennett confessed that he had hundreds of books he had never opened, but, perhaps, he never would open them. But he would not part with them. He said they were good, and as he gazed on them, he said to himself, "Some day, if chance favors, your turn will come. He patient!"

In some States across the line dentists are in the firm position of cash for professional services. One patient arrived with two achers and a cow.

Special knives are used for cutting rubber trees to allow the latex to flow. The knife punctures the tree bark to exactly the right depth.

Of the 312,877 governmental employees in England, 238,554 are men.

ARTICLE No. 36

Does Trauma (Local Injury) Cause Cancer?

While there is a vast amount of evidence, both clinical and experimental, which demonstrates the causative relationship of mild and long-continued injury to the production of cancer, there is comparatively little evidence to show that a single injury, such as a blow, acts as an exciting cause of cancer.

Every doctor has been questioned by a cancer victim as to whether or not the blow the person claimed to have received from the horn of a bullock, for example, was the cause of his cancer. In the absence of any evidence supporting this theory, the answer must be in the negative.

On the other hand there is plain evidence that a great variety of comparatively mild irritants, such as tobacco, soap, certain lubricating oils, etc., will produce cancer in some persons. But recent experimental investigation has shown that in some, at least, of these irritants there is a specific cancer-producing agent. This agent in a few instances has been isolated.

Cancer attacks, on the average, one adult person out of every ten in a given community. This percentage means that one of every ten is more susceptible than the other nine to the irritant which may be in operation. In all of these it affects only the one who is susceptible to cancer.

Moreover, the irritant to be effective in provoking cancer must be applied over a period of years. If it is applied to the skin in a moderate daily for three months, almost invariably the mouse will develop a cancer of the skin. Three months is a mouse's life means about 15 years in the life of a man, so 15 years and upwards of the irritant, required to provoke cancer in a susceptible person. The effect of a given irritant causing cancer periods long after the irritant has been withdrawn.

No tumor has ever been experimentally produced in animals by a single injury. If a single trauma has been the exciting cause of a cancer in a susceptible individual, it is such a case one thinks that some pre-cancerous condition must have existed before the trauma could have acted as "avoid irritant that may excite cancer."

Next article—Carcinogenic Agents.

Editorial Note: Readers desiring the complete set of Dr. McCullough's cancer articles, at once may secure same by writing to: The Health Magazine, Canada, 180 Bond St., Toronto, Ont.

Takes Second Place

America's Talent Playright Much Shorter Than Circus Show

Leonard Lyons tells this story in the New York Post: Robert E. Sherwood, author of "Idiot's Delight," is the latest playwright in America. Sherwood, who is almost 6 feet 7, tendered a party at his home and invited among the guests over whom he'd a power, John Ford, who is the head of the Hingling circus. "I hope you don't mind my bringing a friend along," Sherwood told the playwright. "Just want to point out that you're not the tallest man in show business." The night when in Jack Kautsky's "Hingling circus" who is 8 feet 4.

We Asked For It

A blacksmith and a carpenter spent a day at the local zoo.

The carpenter gave a long talk on the various animals and their habits, until the blacksmith became extremely bored.

Eventually they arrived at the Monkey's den, and the carpenter, in a superior manner, asked the blacksmith if he knew what they were. "Well," replied the blacksmith, "judging by the savannah on the floor, they must be carpenters."

If we judge by human affairs, the world is a worm eaten gnat race.

Hearing, as a rule, is more acute with the right ear than with the left.

THURSDAY JUNE 16th 1938

Mrs. McClary Sr. returned home last Friday when she had been visiting her son and daughter in Los Angeles for several months.

Miss Sarah Davies of the Medicine Hat General Hospital staff is spending her vacation here with her parents, Mr. and Mrs. George Davies.

Miss Kate Luna entertained a number of her school friends at her home last Friday evening. An interesting ball game was in the evening and had other guests on her home lawn after which refreshments were served.

The U. F. A. Convention will be held in Hanna this weekend. Mr. Robt. Gardiner who was once U. F. A. member for this constituency will likely be a candidate again in northern district.

Prime Minister Chamberlain told the House of Commons that Great Britain planned no retaliatory action because of the bombing of British shipping in the Mediterranean but was to work out a system of safety to end the attacks.

If roads from the United States boundary through Alberta to Canada's national parks were "dirted," \$200,000,000 additional tourist business would be realized each year, declared E. T. Scoyen, superintendent of the Glacier National park in Montana.

A very poisonous plant is stated by Experimental Stations that some is growing around this season. This is the Low or two colored Larkspur (Delphinium bicolor). It has large, dark flowers about an inch across with a conspicuous spur similar to the cultivated Larkspurs and delphiniums. Although the seeds are quite poisonous, they are not very likely to be eaten by stock unless cut and dried with hay.

"MEN AT WORK!"

The most cheerful sign on the road

★ ★

"MEN AT WORK" is an encouraging, cheerful sign upon the highway.

It is the happiest sign on the business highway too.

Business enterprise, making wise use of banking service, is the mainspring of employment.

The contractor responsible for that "Men at Work" sign gets the job of building that stretch of highway by being the lowest responsible tenderer.

Not always does he have the ready money to buy all the materials, pay wages and build it out of them. He goes to the bank and, having assets and a good reputation, he negotiates such advances as he may need.

He orders materials, sets men to work. As the job proceeds, engineers' certificates enable him to collect from those with whom he contracted, and the work goes on.

The highway finished, the bank is repaid. Such repayments enable the bank to supply credit to other responsible borrowers.

A manufacturer gets a large order, with an early time limit for delivery. With only a hundred men, his factory cannot turn out the articles within the time required. With more men he can do it—but he lacks sufficient cash.

Operating his factory, as a going concern, with a profitable order and having a reputation for integrity, he asks the bank to lend him what he needs to pay wages.

The bank makes him a loan. He takes on more men. They get wages. The goods are turned out, delivered and paid for. The manufacturer repays the bank with the agreed interest.

He has his profit, and can spend some money developing new business to keep his men employed.

How does a bank make these advances—where does the money come from?

Banks, having branches throughout Canada, mobilize the surplus funds of millions of depositors, large and small, and, based upon them, make credit available throughout the country as may be required.

Millions of little sums represent the toil, production and lifetime savings of Canadians—your fellow-citizens.

Safeguarding these deposits is the bank's first care.

Deposits of \$1,000 or less—most of them much less—are owned by 3,770,000 out of Canada's 4,084,000 savings depositors. The total of all bank savings deposits in Canada is nearly \$1,584,000,000; the average savings deposit in a bank is only \$387.

Wisely safeguarded by Canada's chartered banks these deposits furnish credit that keeps men at work when used by Canadian business and industry—producing new realizable

wealth from Canada's great resources. The country and all its people benefit.

In the field of business deposits, out of an average of \$60,000 "current" accounts, \$96,000 amount to \$1,000 or less.

Savings deposits are, primarily, the basis on which banks can make loans.

Only the confidence of the people and their willingness to leave their money on deposit, enable a bank to lend money and—its small profit-margin to itself—serve the community.

We have mentioned the contractor, the manufacturer. The same process stimulates employment throughout the whole fabric of production, industry and commerce.

Loans to agriculture and for marketing agricultural products totalled in 1937, \$25,234,000—9.0 per cent. of all ordinary bank loans shown on the return to the Minister of Finance, October 31st, 1937.

Of this sum \$7,600,000 went to farmers, cottagers and fruit raisers and \$30,804,000 to grain dealers, seed merchants and grain exporters.

Other bank loans went to municipalities and school districts; wholesalers, retailers, manufacturers of and dealers in lumber, pulp and other forest products; fishermen; fish packers and canners; public utilities including transportation companies; stockbrokers and bond dealers; provincial governments; mining men; churches, parishes; hospitals; and to charitable and religious institutions.

Canada's chartered banks defend and protect the safety of the funds of depositors—billions of thrifty souls we have described, whose life-savings they entrust to their banks.

No Canadian depositor, even through the world-shaking events of recent years, has had to fear for the safety of a single dollar lodged with Canada's chartered banks.

The funds of depositors are their own—not a reservoir from which everybody may draw at will for any and every new financial experiment.

THE CHARTERED BANKS OF CANADA

Your local branch bank manager will be glad to talk banking with you. He will be glad to answer your questions, from the standpoint of his own experience. The next article in this series will appear in this newspaper. Watch for it.

Local Items**

Dr. Lewis has a fine assortment of flowers in bloom in his flower garden beside his office.

Mrs. L. Caloon, who has been visiting friends in Ontario for the past three months, returned home here last Friday.

Mr. Allan Ellis is building a fine modern house on his ranch north of town. When complete it will be one of the finest homes in the district.

There is a dance in the community hall of Box Springs on Friday evening, June the 24th. A fine orchestra will be present and lunch will be served.

Mrs. McCreary, who has been visiting her two sons, John and Walter and her daughter, Mrs. Guy Home in Los Angeles for past six months, returned to her home here last Friday.

Mr. and Mrs. Bert Miller and their two daughters who have been visiting Mrs. Miller's parents, Mr. and Mrs. Benjamin, for the past few weeks, left on Monday last for their home in Los Angeles, California.

Miss Kate Luna entertained several of her young friends to a happy lawn party at her home on Friday evening. After several games were enjoyed, dainty refreshments were served and a pleasant evening brought to a close.

Dr. Robinson, Mrs. Gedick and A. U. Bourcier, who are the Social Credit Relief Committee, are holding sittings again as they have returned from the Saskatchewan election.

Five more banks in Alberta have closed their doors. Two Bank of Montreal and one Bank of Commerce. Official stated increased taxation made them impossible to operate.

Weather conditions this year are quite different in this district than we have ever had before. We have not had real hot weather which is customary in June and our evenings are much cooler than usual. There has been abundance of grass but our gardens are not developing as fast as past years.

FOR SALE:—Five roomed house in fine class location, complete with screens and storm windows. This property is located on two town lots and of which is enclosed by a good substantial fence. A deal can be made cheap for cash. Apply to Mrs. W. Spears, Lockwood.
